

Oral Typhoid Vaccine

Samaritan International Travel Clinic

Oral typhoid vaccine consists of 4 capsules, **1 taken every other day**. To ensure that you get the optimal benefit from this vaccine please follow these instructions:

- The capsules should be kept refrigerated (not frozen) until taken.
- All four doses must be taken to achieve maximum benefit.
- Each capsule should be taken with cool liquid no warmer than 98.6°F (37°C), approximately one hour before a meal.
- Complete this vaccine series at least one week before potential exposure.
- The vaccine manufacturer recommends that oral typhoid vaccine not be administered to infants or children aged less than 6 years.
- Do not take this vaccine when you are taking antibiotics for some other reason as they may make the vaccine ineffective.
